Atty. Dkt. No. 21.1106 Appl. No. 10/540,236 Page 2

Amendments to Claims:

Please amend the claims without prejudice. The listing of claims will replace all prior versions,

and listings, of claims in the application:

Listing of Claims

1. (Currently Amended) A drilling apparatus comprising:

a turbine being provided with a turbine shaft,

a hydraulic braking device configured to operate with the turbine,

wherein the hydraulic braking device eomprising comprises a braking shaft coupled to the

turbine shaft, and the braking shaft consisting of one or more bodies rotatably connected to the

braking shaft, and

wherein when the hydraulic braking device is immersed in a drilling fluid, an axial

rotation of the turbine shaft causes an axial rotation of the braking shaft which in turn causes a

movement of the one or more bodies with respect to the drilling fluid, this movement generating

a resisting torque that is a function of the square of the rotation speed of the turbine shaft with

respect to the drilling fluid providing a quadratic relation, and

wherein the construction of the hydraulic braking device is such that a braking effect is

obtained when the rotation speed of the turbine shaft exceeds a predetermined threshold value

and the braking effect is not obtained when under the predetermined value as a result of the

quadratic relation.

(Canceled).

(Canceled).

4. (Previously Presented) The drilling apparatus according to claim 1, wherein the braking

shaft is coaxial with the turbine shaft.

- (Canceled).
- (Canceled).
- 9. (Canceled).
- (Previously Presented) The drilling apparatus according to claim 1, wherein the one or more bodies are rigidly connected to the braking shaft through a connecting means.
- 11. (Previously Presented) The drilling apparatus according to claim 1, wherein the one or more bodies are fixed directly onto the braking shaft through a connecting means composed of at least one anchor zone of the bodies.
- 12. (Canceled).
- 13. (Canceled).
- 14. (Previously Presented) The drilling apparatus according to claim 1, wherein when the hydraulic braking device comprises more than one body, the bodies are distributed around the periphery of the braking shaft, in a regular manner, or in a non-regular manner.
- 15. (Previously Presented) The drilling apparatus according to claim 1, wherein when the hydraulic braking device comprises more than one body, the bodies have either all the same axial positions along the braking shaft, or different axial positions along the braking shaft.

Atty. Dkt. No. 21.1106 Appl. No. 10/540.236

Page 4

16. (Previously Presented) The drilling apparatus according to claim 1, wherein when the

hydraulic braking device comprises more than one body, the bodies are chosen to be identical or

different

17. (Previously Presented) The drilling apparatus according to claim 1, wherein when the

hydraulic braking device comprises more than one body, the bodies all have the same

dimensions.

18. (Canceled).

19. (Previously Presented) The drilling apparatus according to claim 1, wherein the hydraulic

braking device is arranged on the downstream side of the turbine with respect to a flow direction

of the drilling fluid.

(Canceled).

(Canceled).

(Canceled).

(Canceled).

24. (Previously Presented) The drilling apparatus according to claim 1, wherein the one or

more bodies extend along a length of the braking shaft.

25. (Previously Presented) The drilling apparatus according to claim 1, wherein the one or

more bodies extend in a substantially normal direction from the braking shaft.

26. (Previously Presented) The drilling apparatus according to claim 1, wherein a flow of the

drilling fluid drives the turbine.

Atty. Dkt. No. 21.1106 Appl. No. 10/540,236

Page 5

27. (Previously Presented) The drilling apparatus according to claim 26, wherein the flow is

parallel to a central axis of the braking shaft and to a length of the one or more bodies.

28. (Previously Presented) The drilling apparatus according to claim 1, wherein the turbine

shaft and the braking shaft are coupled by a coupling device so that the rotation speed of the

braking shaft is proportional to but different from the rotation speed of the turbine shaft.

29. (Previously Presented) The drilling apparatus according to claim 1, wherein the one or

more bodies comprise at least one cup-shaped or V-shaped body that is arranged such that the concave side of the at least one cup-shaped or V-shaped body is oriented to face a flow direction

of the drilling fluid.
